

# Comparison of the to Traditional Procedures and Fillers

Key Points   Questions		Face Lifts   Traditional   Procedures	Fillers
How long does it last?	8-12 years	8-12 years	6mo to 1 year
How long is recovery?	week or so	2 weeks or so	3-5 days
How painful is the recovery?	<b>minimal to no pain</b>	very painful	minimal to no pain
How much pain medication do they use for this procedure?	1-2 <b>pain pills</b> to none (not bottles)	1-2 bottles of (45pills) pain medication	tylenol if any need for pain medication
How are the Results?	<b>Results are Better more natural.</b> Volumizing and shaping the face as a whole and not camouflaging and filling in little parts of the convolutions of the raisin. The YoungVitalizer fills the whole raisin back to the youthful grape it once was.	Many times results are pulled and unnatural. Traditional procedures do not reverse the process of aging in a natural way.	Fillers use a camouflage approach and sometimes unnatural looks are the results. Filling small areas of the convolutions of the raisin and not the whole raisin.
What are the differences in the general movement of tissues to rejuvenate?	The Tissues of the Face are Moved <b>Upward and Outward</b> . Just the reverse of the Aging Process.	Traditional Procedures move the Face <b>Upward and Backward</b> creating the unnatural and odd look seen often with these type of procedures.	Tissues are moved in the same direction as the YoungVitalizer but is done piecemeal and can result in unnatural looks.
Does it require incisions?	<b>No facial incisions required</b>	Long facial incisions required. i.e. more recovery!	No facial incisions required
Does it require anesthesia?	Yes IV sedation	Yes IV sedation	Only local anesthesia is needed
Risk of complications?	The <b>YoungVitalizer has much lower risks</b> than face lifts and traditional procedures	Risks of facial nerve damage, infections, skin loss, fluid collection, malposition of the eyelids, ear deformities, scarring much more prevalent, etc.	Much lower than face lifts
Are Drains Required?	No need for drains	Drains are usually always needed	No need for drains
Risks of Scarring	Much lower than face lifts. No incisions needed so scarring is much less.	There is risk of scarring with the long facial incisions	Risk is essentially none

<p>Costs for the results</p>	<p>A fraction of the costs of all the traditional procedures that you would need to achieve all the results possible with the YoungVitalizer.</p>	<p>50000 or more to achieve the same results as youngvitalizer because you would need to do a brow lift   eye lift   face lift   mouth rejuvenation procedures   etc and you would still not look as good as with the YoungVitalizer. Results are also inferior to the YoungVitalizer.</p>	<p>The same amount of rejuvenation with the YoungVitalizer would cost 30000 in fillers and it would last only 6 months to a year.</p>
<p>Improvements in skin</p>	<p><b>The YoungVitalizer achieves improvement in the skin</b> more than any of the procedures that we do including Intense Pulse Light and co2 laser resurfacing</p>	<p>Removes extra skin and thus takes away larger folds and smaller folds. But does not reconstruct the wrinkles back to how your skin used to be, like the YoungVitalizer.</p>	<p>minimal to no improvement in the skin</p>
<p>Improvement in wrinkles</p>	<p>Much more natural improvement and more <b>Reconstruction</b> of the actual wrinkles</p>	<p>Removes extra skin and thus takes away larger folds and smaller folds. But does not reconstruct the wrinkles back to how your skin used to be like the YoungVitalizer.</p>	<p>Yes but only does it by plumping the skin and does less reconstructing of the skin and wrinkles than the YoungVitalizer</p>
